

UNSTOPPABLE POWER

At SENIX, we don't just build tools, we forge the future of outdoor power equipment and power tools with relentless innovation and uncompromising performance.

From DIY projects to professional job sites and outdoor landscapes, SENIX tools deliver the power, precision, and reliability you need to build, shape, and create with confidence. Designed as an extension of your expertise, our tools combine precision, power, and eco-conscious engineering to help you push limits and get the job done.

In the yard, in the shop, anywhere there's a job to do, power through with SENIX!

SENIX GLOBAL FACTORY

JIAXING FACTORY

1st Phase:

Site Area:170,000m²

Phase 1: 71 production lines

2st Phase:

Site Area:330,000m²

Phase 2: 80 production lines

Guided by the value-driven principle, we are building a first-class benchmark smart factory featuring automated equipment, transparent production, intelligent logistics, mobile management and data-driven decision-making. We realize precise planning, flexible production, rapid distribution and efficient material flow to provide customers with high-quality products and services.

NINGBO FACTORY

20 assembly lines in total (12 for power tools, 6 for home appliances, 2 for ice-making & refrigeration)

MEXICO FACTORY

Site Area: 19,907.5m²

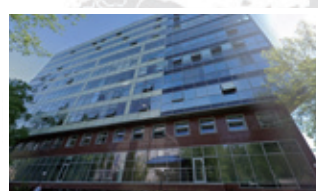

The general assembly plant of the Mexico factory has 16 production lines, including 3 power tool lines, 5 lawn mower lines, 4 handheld tool lines and 4 pre-processing lines.

The in-house manufacturing workshop and injection molding workshop are equipped with 50 injection molding machines with clamping forces ranging from 120 to 2600 tons. The electronic workshop has 2 battery pack packaging lines and 2 assembly lines, and the motor workshop is equipped with 4 motor production lines.

THAILAND FACTORY

Site Area: 44,079m²

8 assembly lines, 5 motor production lines and 1 battery pack production line are equipped with full-process automated production lines, covering battery pack assembly, testing, coding, welding and motor component manufacturing, enabling highly efficient and automated production from single cells to finished battery packs. The production lines integrate an intelligent control system and a data traceability platform, supporting real-time monitoring, data analysis and interconnection with ERP/PLM systems to ensure high-quality manufacturing and full-process traceability.

SENIX'S ADVANTAGES

Modernized Logistics Control Systems

With the integrated MES, WES, ERP, warehouse automation, loading and unloading mechanization, packaging standardization, transport process networking, integration of processing and distribution, we have successfully realized the electronic utilization of system information management. The operators, through a PDA, are guided by automatic input via an advanced information technology system resulting in the strategic realization of enterprise management data management and greater production automation.

Modernized Automated Production Systems

Oriented by the transmission of production technology, SENIX is upgrading to merge “two integrations” production process automation and product information data. As a result, SENIX can create new assembly lines on its own initiative and adopt semi-automation and full-automation in some process. Now we have already used automated equipment for on-line inspection, assembly, packing and warehousing. It is important to improve the daily efficiency and support the production line to keep quality consistence. With this production information (MES) system going into use, the overall assembly capacity is greatly improved.

From VOC (Voice of Customers) to CTQ (Critical to Quality)

Situation:
Challenge for inventive,
cutting-edge technology

Action:
Develop strategic
innovation plan

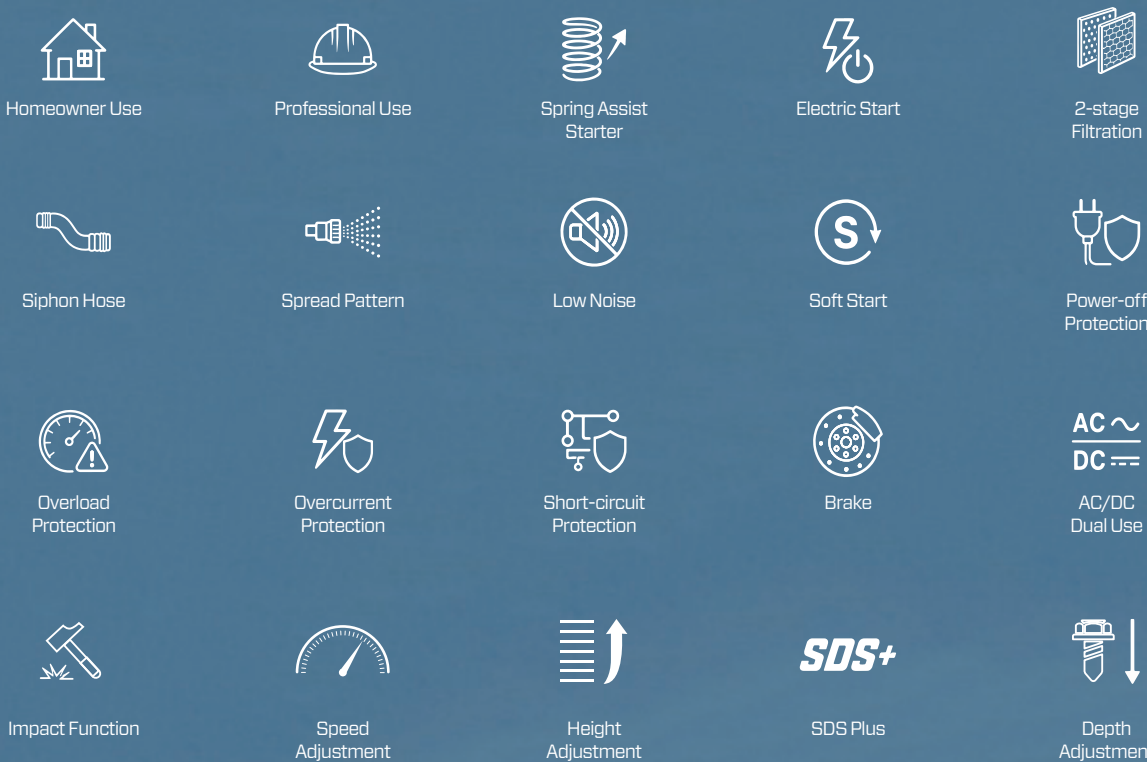

Result:
Delivery of state-of-the-art tools,
machinery, and robotics

Quality Control Recognition

In 2008, SENIX laboratory was authorized by the third party certification agencies like TÜV-RH, TÜV-SÜD, ITS, CSA, etc. as a "witness laboratory". In 2010, the laboratory was awarded "National Laboratory" by the China National Accreditation Committee for conformity assessment. In 2011, the laboratory was awarded the "Zhejiang Export Inspection and Quarantine Laboratory Evaluation of Enterprise Certificate" by Zhejiang Import-Export Inspection and Quarantine Bureau, in fulfillment of testing on power tools, garden tools and gas products. The laboratory has the capability of performing numerous tests on power tools, garden tools, chain saws and gasoline mowers, these tests include: temp, rise, safety, lifecycle, salt spray, environmental, EMC, and emissions testing.

BATTERY TECH

SMART CHARGING TECHNOLOGY

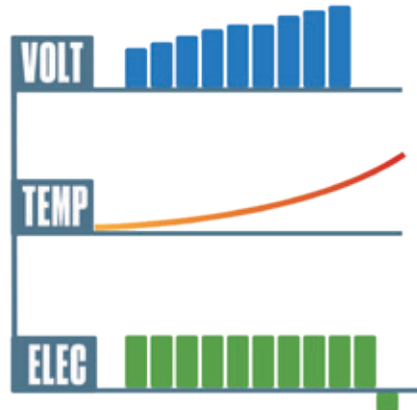

Rapid charging generates heat, requiring a cooling period before resuming.SENIX's advanced technology integrates a high-efficiency cooling fan to enhance air circulation, maintain optimal battery temperature. reduce charging time, and extend battery lifespan.

SENIX RECHARGE TECHNOLOGY

NORMAL RECHARGE TECHNOLOGY

SENIX batteries use voltage transfer technology to maximize cell longevity, maintain heath, & reduce heat during charging.

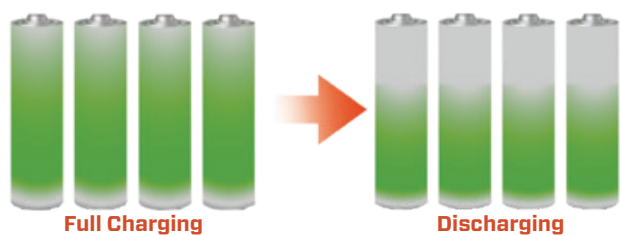

BATTERY PROTECTION FUNCTION

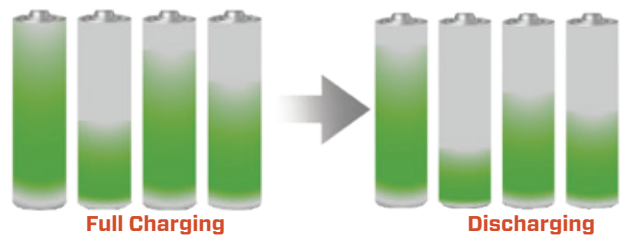

Protection Function:SENIX batteries monitor real-time status and exchange data to prevent overcharging, over-discharging,and overheating, ensuring longevity and optimal performance.

Balanced Charging: Battery cells recharge evenly at the same voltage, preventing over/undercharging. This uniform method extends battery lifespan,improves efficiency, maximizes performance, and enhances safety.
